

**Once your lawn has been hydroseeded, the work has just begun. To turn your newly hydroseeded area into a beautiful, healthy, lush green lawn it is going to need some attention.**

**Watering instructions:**

- ❖ Hydroseed should be watered 3 times per day for approximately 10-20 minutes per watering cycle.
  - ❖ The ideal times are 4:00AM, 11:00AM, and 4:00PM. (Do not water after dark)
  - ❖ You may adjust the watering slightly for seasonal changes at your discretion, i.e. increase for the hot summer months or decrease for the cooler fall months.
  - ❖ The hydroseed needs to remain moist in order to germinate properly. The soil does not need to be constantly sopping wet.
  - ❖ DO NOT create pools of water on your lawn; just keep the seed consistently damp & moist.
  - ❖ After 4-6 weeks you may begin to scale back watering to 30 min every other day.
- 
- With proper watering and fertilizing, you will see germination start within 10-14 days, a mowable lawn in about 6-8 weeks, and a fully established lawn in about 6-9 months. Green dye will fade within 2-7 days.
  - 2 weeks after we hydroseed your lawn, it is highly recommended that you apply an 18-24-12 starter fertilizer to the lawn. That fertilizer is available at any Landscape Supply location. 3 weeks after that application you can follow up with an additional starter fertilizer application. Do not apply any weed control to the lawn for the first 10-12 weeks. You may get some weeds in your lawn, they can be taken care of with a weed control fertilizer once the lawn begins to mature.
  - -The first mowing will be done approximately 5 weeks after the lawn was hydroseeded. It is recommended that your lawn is mowed when it is dry, with a push mower, to do as little damage as possible to the new seedlings. You may suspend water for a few days to allow the soil to dry properly prior to the first mowing. The clippings should be collected... DO NOT leave any clumps sitting on the lawn, as they will damage the new seed.
  - DO NOT allow the lawn to grow to an unreasonable height. Doing this and then mowing it back down to a normal height will definitely damage the grass, and it will be difficult to bring it back to good condition. If you are planning to go away or are unable to mow it for more than a week, hire someone to mow it for you. Never mow more than 1/3 of your lawn's height off in one mowing. If it has overgrown, wait 2-3 days between each cut and gradually mow it back down to a height of about 3".
  - If your lawn is seeded in the Spring and Summer, you should expect to overseed in the Fall. Use a mix of Fescue, Rye and Kentucky Bluegrass.
